

## Welcome back Save As...

One of my greatest frustrations with Lion and Mountain Lion has been the absence of 'Save As...' in the menus. I never understood why they removed it in the first place and the 'Duplicate' function that has replaced it is tedious and unintuitive if you know anything about folder structure in a computer.

So I was particularly happy to come across this fix, to restore "Save As..." to its original function. See below.

1. Go to your *System Preferences* and choose *Keyboard*.
2. Choose *Application Shortcuts* and press + to create a new shortcut.
3. Enter the menu title "Save As..."
4. Enter the shortcut (Shift CMD S)
5. Add the shortcut

Voilà! It will now be available in all your applications.
