

## If you can't connect to Airport Express through Airplay

It had been frustrating me for weeks now, not being able to select my AirPort Express as the audio output for my MacBook Air (wanting to stream Spotify to my speakers). The selector would simply keep jumping back to 'Internal Speakers'. My initial Google search on the matter told me that I was not alone with this problem (it's something that has popped up since the advent of Lion and Mountain Lion apparently), but the only solution I could find that worked was to restart the Mac which is rather annoying to say the least.

But today I found a permanent answer on [this page](#).

Basically, you need to disable IPv6 on your Mac and this is how you do that:

1. Open Terminal (found in your Applications>Utilities folder).
2. Type the following:  
*networksetup -setv6off Wi-Fi* (Airfoil.... that works at least.
